

Brother Nordic A/S in Denmark is the Head Office for the Nordic sales Companies of the Brother Group, whose corporate headquarter is in Nagoya, Japan. Brother Nordic A/S has Branch Offices in Norway, Finland and Sweden. We have a strong commitment to an integrated environmental strategy which runs throughout the entire Brother International organization and we are guided by legislation and Brothers' own internal environmental policies.

The overall Brother Group philosophy is that we positively and continuously act to improve our environmental performance so that society can become more sustainable. Environmental management is an integral part of our business decision making process and we strive to make continual improvements to protect and preserve the environment. The ultimate responsibility and authority for all environmental issues is that of Managing Director.

In all Nordic Brother Companies, in order to minimise our impact on the environment, we have adopted the International Environmental Management system ISO 14001. Working within this framework and applying Brothers' own 5R concepts, we will continuously evaluate and improve our environmental performance.

At all times, Brother will operate within the environmental legislation of European Union and local laws and regulations in all Brother Nordic Companies and will continuously monitor such legislation as it progresses.

The Brother Nordic Companies do not manufacture products. As sales companies, we promote the environmental benefits of our products and our Head Office in Denmark reports back to our regional head office in Manchester, U.K. the demands and comments of our customers. Our producer responsibility awareness ensures that safety and environment impact are prime considerations at every stage of our products' lifecycles, from design through to manufacturing and disposal at end of life.

As a sales office we work to improve our energy efficiency, improve purchasing with environmental considerations, e.g. environmental labelled products and improve recycle waste.

We will review our progress regularly and are committed to improving our environmental performance by informing and educating employees, external companies and our customers to raise environmental awareness.

This is achieved by in-house company newsletters, product environmental labels and web based literature.
